Claim 4; Page 18; 28pp; English.
The sequence was deduced from a cDNA insert from pAE-III-202-4
(FERM BP-3172). The vector serves as a source for a DNA fragment encoding PHL for the construction of an expression vector for the prepn. of recombinant PHL. The protein may be truncated to comprise only residues 383-706 or 383-713. The PHL catalyses the reaction: R-GlyOH -> R-NH2. It can be used to produce peptides wit amidated C-termini, e.g. calcitonin, growth hormone, LH-RH.
                                                                                                                                             313
                                                                                                                                                                         526
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel DNA encoding peptidyl hydroxy:glycine N-C lyase (PHL) used to prepare PHL which can be used in the amidation of peptide(s) e.g. human calcitonin.

Disclosure; Fig 1; 13pp; English.

cDNA was prepd. from FIPV straim 79-1146. N81533 gives the sequence
of the peplomeric gene in three reading frames. The top reading
frame is an open reading frame of 4356 nucleotides and has a coding
capacity for a precursor polypeptide having a mol. wt. of 160,470
(1452 AAs). The beginning and the end of the E2 gene are indicated
in the FT of N81533. The first 18 N-terminal AAs have a strong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence encoded by the 2nd reading frame of FIVP strain 79-1146.

Vaccine; peplomeric protein; E2 gene. Feline infectious peritonitis virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hydrophobic character and presumably comprise a cleavable signal peptide. The extreme carboxy-terminal part comprises a region of 20 hydrophobic AAs, which presumably serves as a transmembrane anchor. The FIPV peplomeric protein has 35 potential glycosylation sites, of which 22 are in the N-terminal part (pos. 1-790) which corresponds to the S-part of the IBV E2 (see P81183). N.B. IBV = infectious bronchitis virus. "X" in the AA sequence denotes the translation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  840

Bovine biglycan (R87953) is a chondroitin sulphate proteoglycan with neurotrophic activity for brain neurons. It can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also be used to restore function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        111

Rat biglycan (R87951) is a chondroitin sulphate proteoglycan with neurotrophic activity for brain neurons. Recombinant biglycan, obtd. by expression of encoding cDNA (708768) in eukaryotic host cells, can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         259

Human biglycan (R87952) is a chondroitin sulphate proteoglycan with neurotrophic activity for brain neurons. It can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also be used to restore function following nervous system lesions and degenerative diseases, and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human neurotrophic biglycan.

                                The sequence encodes a derivative of the mature C-terminal alpha-amidating enzyme from plasmid pxA/99. amidating enzyme from plasmid pxA457. The plasmid was screened from an E.coli library using plasmid pxA457 to screen a larger library. Although pxA799 is similar to pxA457 at the N-terminus, it has an ar

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant C terminal alpha amidating enzymes of Xenopus laevis and their precursors deoxyribonucleic acid encoding sequences. Disclosure; 7pp; English.

Plasmid pXA799 contains a sequence derived from Xenopus laevis. The plasmid was screened from an E.coli library using plasmid pXA457 to screen a larger library.

Although the gene product is similar to that of pXA457 at the N-terminus, it has an area of hydrophobic elements suggesting a membrane function. See also N93060.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          P94854; standard; protein; 875 AA.

                                                                                                                                                                                                                                                                           3mu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alpha-
amidase enzyme (AE)) were suspended in F-12 medium to which aliquots
of trichostatin were added. Cells were cultured for 3 days at 37 deg
and then assayed for AE. Without trichostatin, AE productivity was
708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities
were respectively 866, 1897, 1894 and 3359 U/ml.

They were identified using methods designed to identify transcription factors involved in RNA polymerase II c-terminal domain (CTD) function. SRB8 and SRB9 appear to repress CTD activity. Genomic clones (T59904-11) for the SRBs have been obtd SRBs can be used to treat diseases resulting from alteration or deletion of the SRB gene, pref. by gene transfer technology. They can also be used in in vitro transcription of DNA and to identify cpds. that modify gene transcription.

Biosynthetic enzyme of icosapentaenoic acid synthase.
Icosapentaenoic acid synthase; EPA; drugs; agrochemicals; foodstuffs; animal feed; lipid balance correction; antihypertensive; antiinflammatory; anticancer agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 7; Page 83-94; 145pp; English.

The DNA sequence (T34137) which encodes the biosynthetic enzymes of icosapentaenoic acid (EPA) can be used to transform Escherichia coll. The DNA sequence allows efficient microbial production of EPA, which is a raw material for drugs, agrochemicals, foods and animal feedstuffs. EPA is also useful for lipid balance correction and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (SAGA ) SAGAMI CHEM RES CENTRE.

The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such that the spike protein can be isolated.

                               races or patient samples

Disclosure; Fig 7; 165pp; English.

This is the amino acid sequence of the protein encoded by the wbdM gene of a gene cluster (see x06748) involved in the biosynthesis of the Escherichia coli Olll O antigen. The protein shows high homology with TrsE of Yersinia enterocholitica, and is predicted to be a colitose or glucose transferase. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in testing food or faecal-derived samples, or samples from patients.

The O antigen is a major virulence factor of enteropathogenic E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              _documentation_block:

Gene coding for eicosa penta:enoic acid synthetase - is isolated from pseudomonas, Alteromonas or Shewanella and used for recombinant prodn. of eicosa-penta:enoic acid Claim 6; Page 52-63; 106pp; Japanese.

EPA is useful as a drug, having anticoagulant, hypolipemic, hypoglycemic, antihypertensive and anticancer activity. It is also a pesticide and is useful as a nutritional foodstuff and animal feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2857 ysSerThrAlaPheAspPheLeuLysMetMetPheArgAsnSerTyrPhe
